

TOPIC- THRESHOLD THROUGH TRANSPERANCY
 BUILDING NAME / THRESHOLD NAME- SPREAM-
 INT CLUB
 ADDRESS- 14 KING STREET, MELBOURNE
 DATE OF CATALOG- 11th MARCH

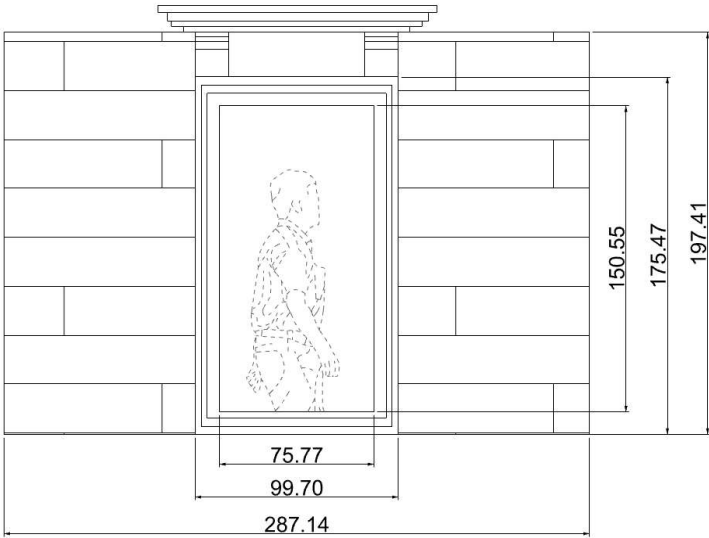

LEVEL OF TRANSPARENCY

The element we chose was a window. Different windows with different contexts and how they aid to the different purposes of the building. The windows of the first building were of regular glasses that opens vertically and roller blinds. The windows of the second building were of obscure glass that don't open. The third building's windows were of regular glass but the middle rows of the windows were close shut, whereas the windows on the top and bottom can be opened. So the system we have chosen is how a single element with different materials or ways of usage can be used for a single building for different purposes. The above image also demonstrates how a transparent, translucent and an opaque surface works and how it effects the vision of the person.
