

TEXTURE AND MATERIALITY  
FROSTED GLASS AND STONE BRICK  
3 SPRING STREET  
2008/2020

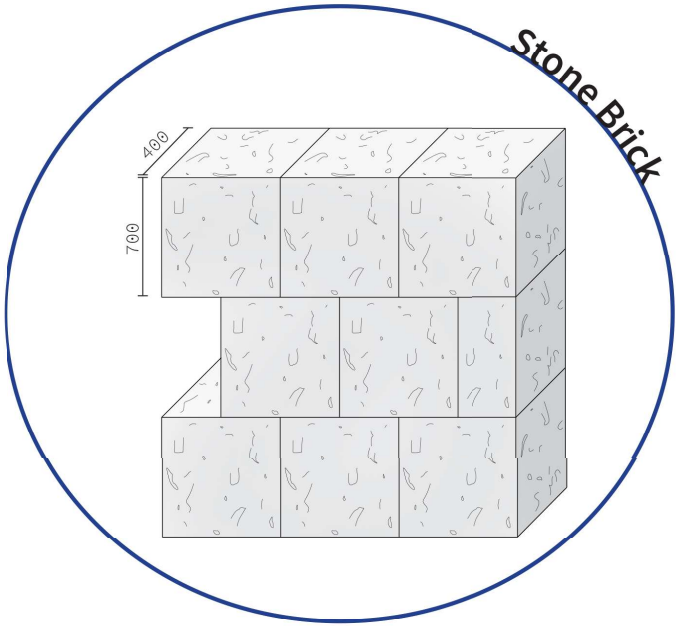

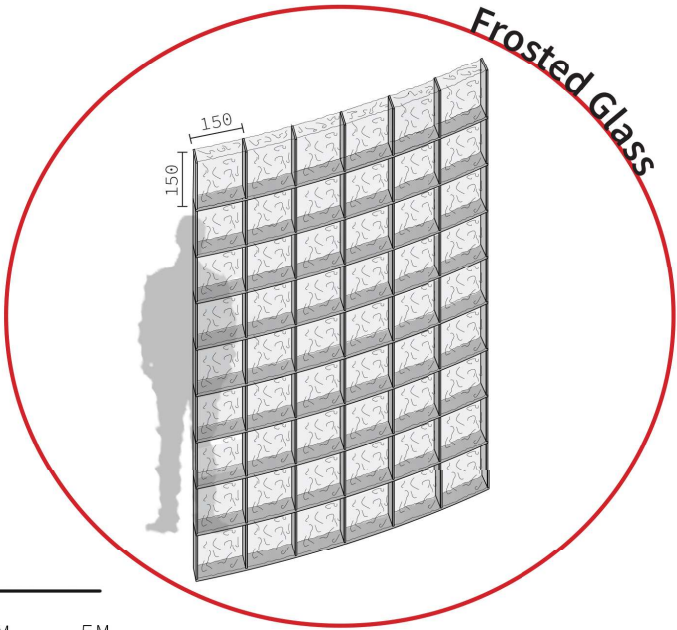

#### SYSTEM DESCRIPTION

Visibility through solid stone brick and opaque distorted glass.

Frosted glass call out represents the way it sits in plan, so when it is seen in elevation, lines vary widths. The texture is semi transparent and when looking out, the view is skewed. Frosted glass has a bumpy texture but it's cladding is opaque

Large bricks on the facade showcase a combination of a smooth and rough texture. Stone has been topped with a shiny finish so it is smooth to touch but rough to percieve
