Programmed Orientation

In this system, the intricate façade is not only a feature of aesthetics but of function, where a complex grid is introduced with extruding pyramidal volumes that while being aesthetically functional, they protrude out in very specific orientations and sequence that build the architectural narrative of the building. All the pyramids have different shapes from the same metallic material of the base grid itself, which seem to be all formed from a one continuous fabric, with the light reflecting over the differently oriented surfaces highlighting different elements of the building and its surrounding.
