

CATALOG 1, CLASS 3  
CANOPY  
46 HARDWARE LANE  
4-6TH MARCH 2022

SYSTEM DESCRIPTION

THE IMPERMANENCE OF PROTECTION  
By having a surrounding layer of security, a 'bubble' of protection is formed which acts as a shield from the harsh outer elements. This fixed component rebounds any unnecessary and/or unwanted conditions, creating a safe and stable environment within. However, this thin layer determining the level of security within is a temporary system that can be withdrawn at any desired time.
