S25: AWOL

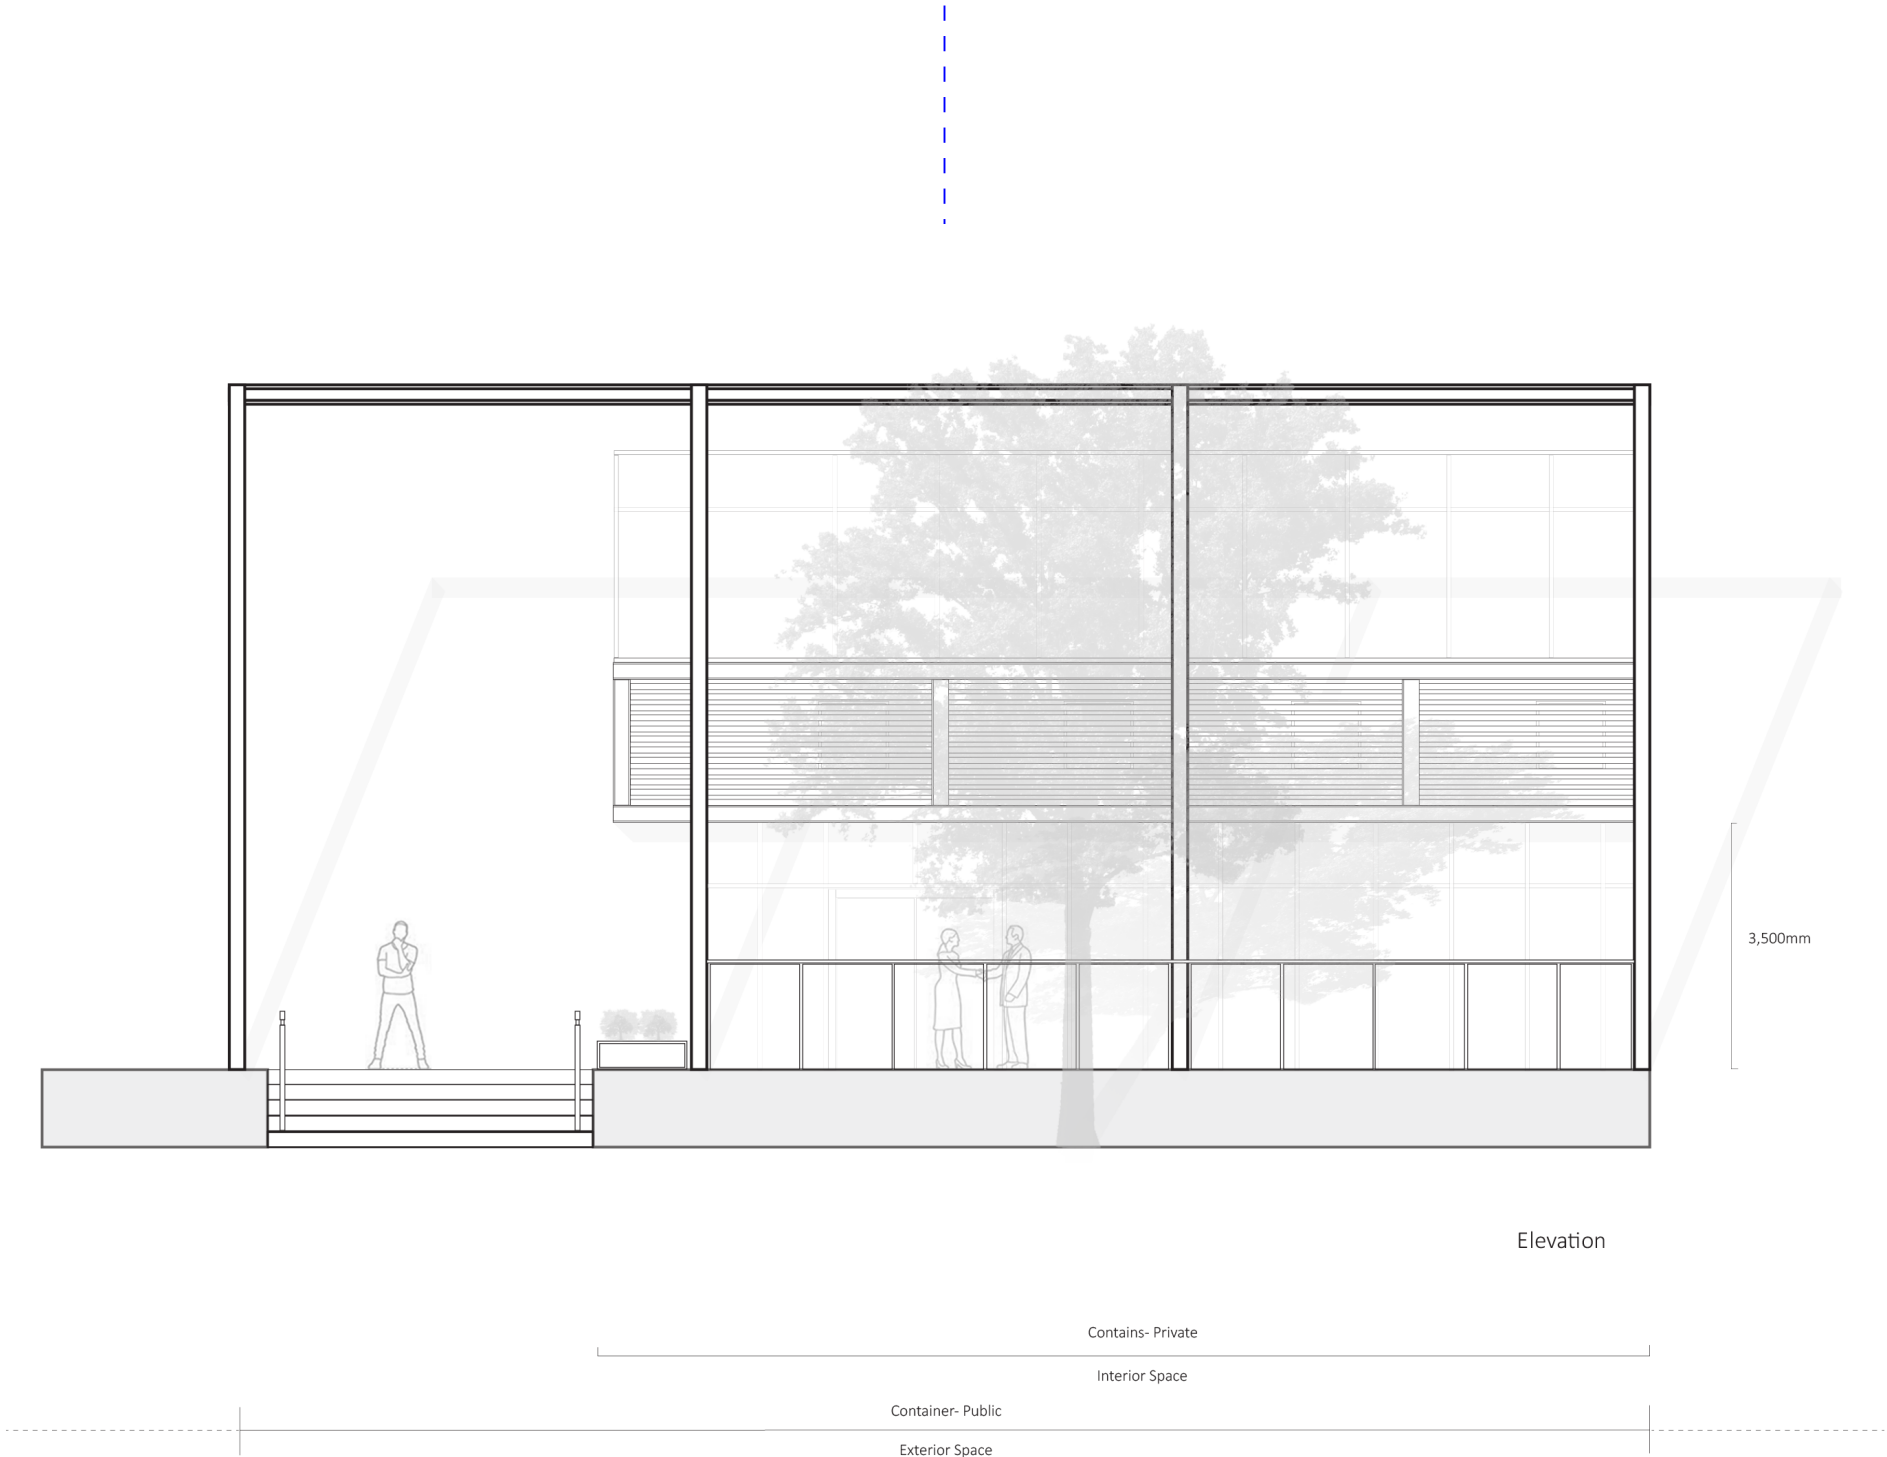

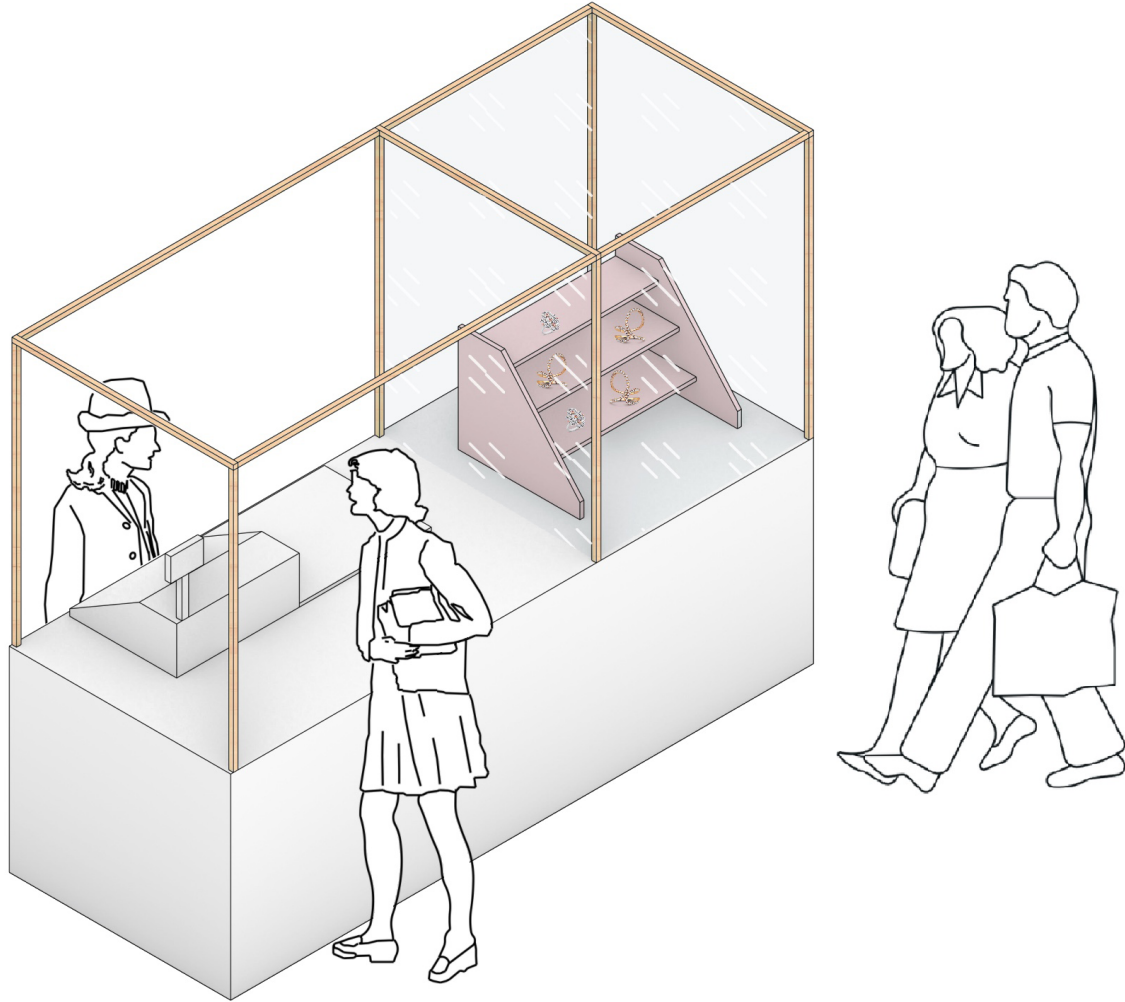

Container and Contained'

The system is about the frame which can define a new space and contain something inside.

The diagram explains that an internal part is contained by the external frame attached to the existing structure.

E is the existing structure.
C is the city, the exterior space.
F is the frame which define a boundary.
X is the objective being contained.

A jewelry Counter

According to the diagram, the system could be applied to high-light high-value products such as jewellery. Because of being contained by the frame, the displayed items can be well isolated and protected. On the other side is the counter, the frame is void. It allows interaction to happen.
