

BUILDING ELEMENTS 2  
RITZ KEBAB  
200 SPENCER STREET, MELBOURNE, VIC 3000  
27 AUGUST 2020

### SYSTEM DESCRIPTION

## AROUND THE BOUNDARY, THROUGH THE OBSTRUCTION

# DOCUMENTATION

While the column has structural importance to the building it interrupts the regular footpath circulation forcing pedestrians to either go into a more open area that's easier to navigate but without shade or remain in the shaded area but have to navigate the more smaller, more awkward area that forces you to be close to the buildings. Unlike the Spencer street footpath which is entirely linear with no facets of the building going over to the footpath apart from the canopy, the Little Bourke street footpath has these obstacles in the middle of the pedestrian circulation space that gives the pedestrians more agency, forcing them to make a decision, even if that decision is quite menial.
