

CATALOG 3
DOUBLE-SKIN SYSTEM
386-372 Little Lonsdale St
12nd March 2022

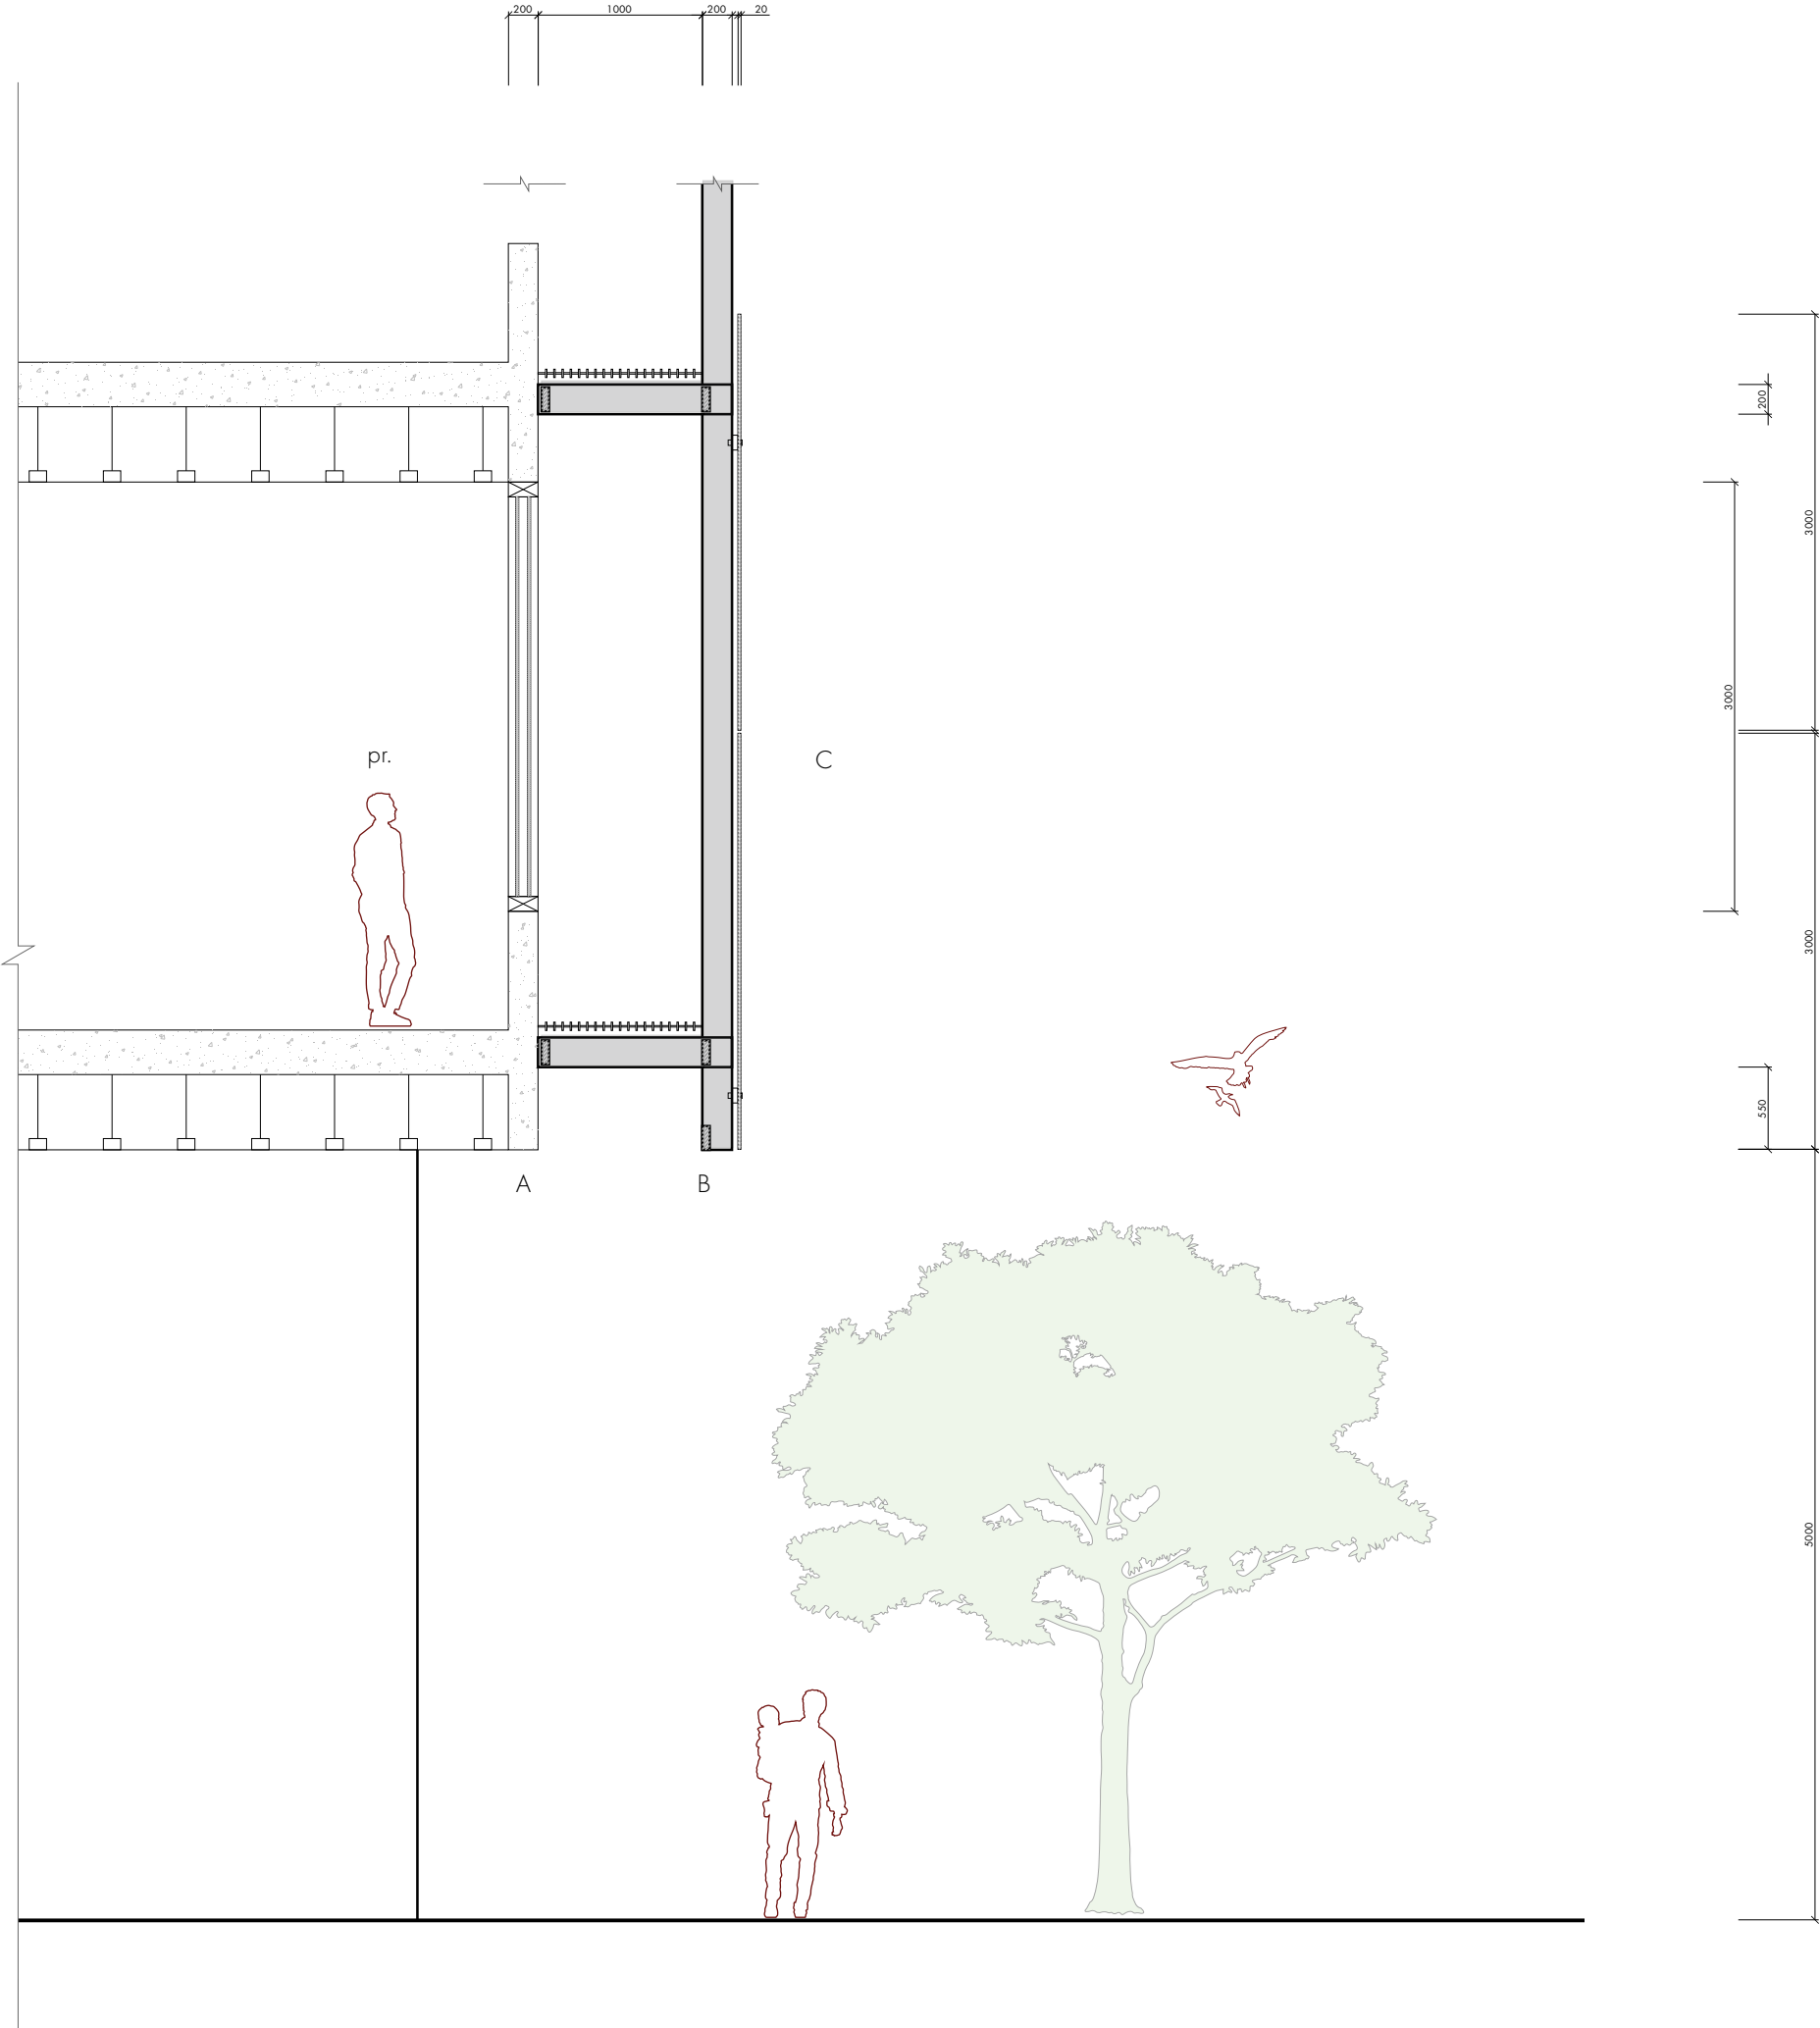

THE FILTER

The chosen element is a double skin facade.

This system includes a host (wall) and an attached element (external glazing), both of which filter substances that travel through. The filtering results differ depending on the nature of that substance, some are able to go through both layers intact. However, others are reduced in intensity or even completely blocked out at the attached element or the host. For instance, in real life, the sunlight is diffused, the visibility is reduced, and the wind is much more resisted.
